

**This product is intended exclusively for transporting dogs and should not be used to carry children or any items other than a dog.**

**Please carefully review the instructions before placing your pet in this seat.** Ignoring these guidelines may lead to severe injury. By attaching the Pooch My Ride Dog Carrier to your bicycle, you confirm that you have read and understood all warnings and instructions.

Be aware that transporting a pet on a bicycle carries certain risks, similar to those you face while riding. Pooch My Ride/British Innovations Group is not liable for any injuries that may occur. Only experienced adult cyclists who are fully confident in their riding skills should use this seat to transport a pet. The Pooch My Ride Dog Carrier is designed solely for leisurely riding; engaging in extreme cycling with your pet increases the likelihood of injury.

Before every ride, ensure that all screws and bolts are tightened and securely in place.

**DO NOT INSTALL ON A CARBON FIBER SEAT POST.**

If your bike has a carbon fiber seat post, replace it with one made of aluminum or steel.

Just like a seat belt on a child car seat, the Pooch My Ride safety harness is specifically designed to limit unnecessary movement, ensuring your pet stays securely in place for a safe and enjoyable ride. It's essential to use this harness at all times.

Before every use, make sure the seat is firmly attached to the bicycle and that no parts are cracked, loose, missing, or broken.

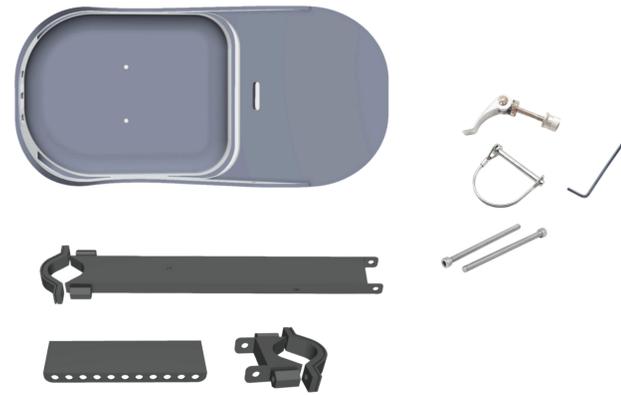

Given the added size and weight when transporting a pet on a bicycle, it's crucial to exercise extreme caution at all times. The rider may need to make quick adjustments if the pet shifts its weight unexpectedly.

Take care when placing your pet into the seat and when removing them. This should be done in a safe area, away from potential distractions like other pets or traffic.

Start with brief rides on smooth surfaces in a safe, distraction-free environment. Only increase the ride's duration once both you and your pet are comfortable and confident. Avoid extended rides during extreme temperatures, whether hot or cold, and always bring water along for your pet.

Never leave your pet unattended in this seat. Due to the higher center of gravity, a bicycle could tip over if left on its stand or without proper support.

Finally, ensure that your pet does not become a distraction while riding. Keep your attention on the safe operation of your bicycle, obeying road rules, and staying aware of your surroundings, including other cyclists, pedestrians, and traffic.

### Step One

Ensure all parts are in the box.

**Based on the style of your bike, you'll need to assemble the mounting frame to suit the styling of your bikes crossbar.**

### Standard Crossbar

### Step Two

For bikes with a **standard crossbar**, configure your mounting frame as shown.

### Step Through Bike

### Step Two

For **step through bikes**, configure your mounting frame as shown.

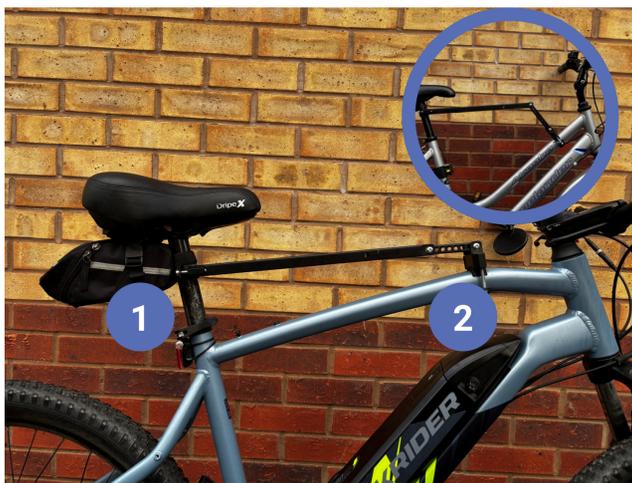

### Step Through Note

&

When setting up for a Step Through Bike, remove the bolt. Next, insert **Part 1** into **Part 2** as far as it will go. Once aligned, reinsert the bolt and firmly fasten.

### Step Three

First attach the mounting frame to the bike's seat post **(1)** and loosely tighten the screws. Repeat the process on the other end of the frame **(2)**, before ensuring both sides are firmly fastened.

### Step Four

Mount the dog carrier to the adjustable frame and align it so that it matches up with the frame's mounting holes on the side and the top.

### Step Five

Insert the quick-release clamp into the hole at the top of the frame. Loosely tighten the lower bolt underneath the frame.

### Step Six

Insert the shaft locking pin and close it. Now you can go back to the quick-release clamp to fasten up and lock in its horizontal position.
